New Progression Website Launched

HAVERHILL, MA (February 8, 2010)—In response to its expanding product line, Progression, Inc., launched its newly redesigned website (www.progression-systems.com). The website was designed to extend Progression's reach to a wider audience. The objective was to create a site that provides online visitors with dramatic improvements in navigation, uniformity, and appearance as well as offering more relevant information to the growing markets that Progression serves.

The design of the new site is a result of Progression's on-going collaboration with Studio Three Design, who has worked on the company's brand development since the company was founded in 2002.

"This was a challenging task," described Anne Marino of Studio Three. "In addition to Progression's proven track record in the petrochemical industry, the company has made great strides in using their technology to create solutions for other markets, such as coal energy and biofuels. The challenge we faced was incorporating into the design, a website that better reflects the diversity of the industries that Progression serves."

Progression also partnered with 108 degrees for web development and utilized their expertise in search engine optimization to increase visibility on the web.

The enhanced navigation works in intuitive and consistent ways, making it easier for online visitors to find the Progression solutions that meet their needs. Improving the user experience has already resulted in higher web traffic and generated qualified leads for the sales department within hours of going live.

"Studio Three and 108 degrees not only offered their wealth of knowledge, but also demonstrated a passion for what they do. Working hand and hand on this project fused a strong partnership that was an integral part in the success of our website," stated Tracy Forrestand, Communication Manager for Progression, Inc.

About Progression, Inc.

Progression, Inc. (www.progression-systems.com) has an extensive background in the development and implementation of process NMR and holds a broad intellectual property portfolio in its use and application. In addition the company provides process LIBS instrumentation, custom sampling systems, two-phase mass flow monitors and electrostatic charge measurement devices for monitoring unique applications within the chemical, energy and mining industries.
